

Setting Up SMTP Services

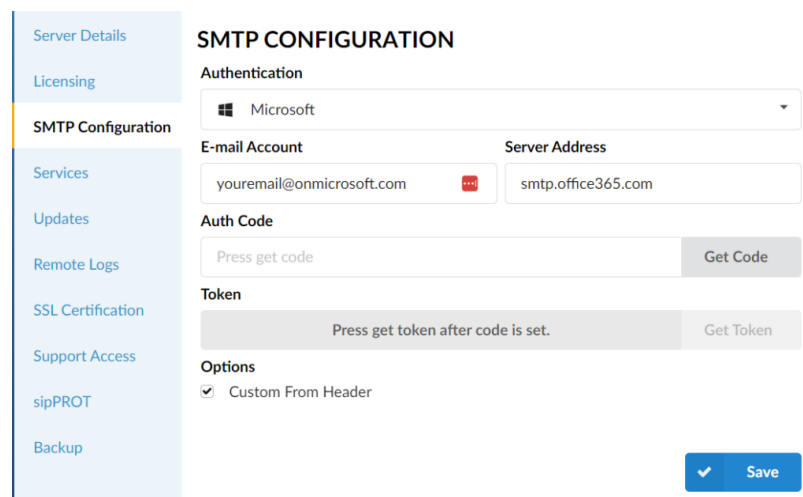

SMTP Services allow the system to send out email regarding the system. These email include things like system alerts, voicemail notifications, etc.

To access the SMTP configuration

1. Click the Admin Settings button located at the bottom of the left Menu
2. The Menu will change to Admin Settings Menu
3. Click on SMTP Configuration

Microsoft & Google OAuth

A screenshot of the SMTP CONFIGURATION form. On the left is a sidebar menu with options: Server Details, Licensing, SMTP Configuration (highlighted), Services, Updates, Remote Logs, SSL Certification, Support Access, sipPROT, and Backup. The main form area is titled "SMTP CONFIGURATION" and contains sections for Authentication, E-mail Account, Server Address, Auth Code, Token, and Options. The Authentication dropdown is set to "Microsoft". The E-mail Account field contains "youremail@onmicrosoft.com" and the Server Address field contains "smtp.office365.com". The Auth Code field has a "Press get code" placeholder and a "Get Code" button. The Token field has a "Press get token after code is set." placeholder and a "Get Token" button. The Options section has a checked checkbox for "Custom From Header". A "Save" button is at the bottom right.

1. Select the Authentication type from the drop down.
2. Enter a valid email account.
3. Server address should be automatically entered for you.
4. Click Get Code
5. Once the authorization code is presented, copy and paste it into the auth code field and click Get Token
6. If all fields are correct, a notification will be displayed that the token is generated.
7. Click OK
8. Click Save

NOTE: Please note, for Google and Microsoft account setup, the e-mail address used must be the same as the one you used to log into your Google/Microsoft account.
